February 2016

CQC has developed a model for monitoring a range of key indicators about Trusts that provide Mental Health services. These indicators relate to the five key questions we will ask of all services – are they safe, effective, caring, responsive and well-led? The indicators will be used to raise questions about the quality of care. They will not be used on their own to make judgements. **Our judgements will always be based on the result of an inspection, which will take into account our Intelligent Monitoring analysis alongside local information from the public, the trust and other organisations.**

What does this report contain?

This report presents CQC's analysis of the key indicators (which we call 'tier one indicators') for Northumberland, Tyne and Wear NHS Foundation Trust. We have analysed each indicator to identify two possible levels of risk.
We have used a number of statistical tests to determine where the thresholds of "risk" and "elevated risk" sit for each indicator, based on our judgement of which statistical tests are most appropriate.Where an indicator has 'no evidence of risk' this refers to where our statistical analysis has not deemed there to be a risk or elevated risk. For some data sources we have applied a set of rules to the data as the basis for these thresholds - for example concerns raised by staff to CQC (and validated by CQC) are always flagged in the model.

Further details of the analysis applied are explained in the accompanying guidance document.

What guidance is available?

We have published a document setting out the definition and full methodology for each indicator. If you have any queries or need more information, please email   enquiries@cqc.org.uk   or use the contact details at   www.cqc.org.uk/contact-us

Suppression: We apply a strict statistical disclosure control in accordance with the HES protocol to all published data. This requires that small numbers are suppressed to prevent individuals being identified and to ensure that patient confidentiality is maintained. An asterisk (*) in the observed column indicates a suppressed value between 1 and 5.

Not applicable or N/A Values: "n/a" is used to mean either that an expected value is not relevant to a specific indicator because the indicator is rules based or the indicator does not have an observed value.

Rounding: All observed values have been rounded to two decimal places. Therefore, numbers that are less than 0.005 may be displayed on this report as '0.00'. The datasheet contains the numbers used to calculate the indicators.
