

# Breast cancer in men

Information for service users

Easy Read

**A member of staff or a carer can support you to read this booklet. They will be able to answer any questions that you have.**

## **Do men get breast cancer?**

Most men think that only women get breast cancer. This is not true – men can get breast cancer as well.

Breast cancer in men is rare but does happen.

Checking your chest/breasts can help you detect early signs of cancer.

You should check once a month.

## What should I look for?

Get to know how your chest and breasts usually look and feel.

Check your chest and breasts when you are in a warm bath or shower.

Look out for:

- Lumps
- Leaks from a nipple
- Tender or pulled in nipple
- Swelling of the chest/breast
- Swelling underarm

## What should I do if I notice any changes?

If you notice any changes you must go to see your doctor as soon as possible.

If you want any more information please contact your GP, Practice Nurse or Community Nurse.
